FROM THE NEWSWIRE

OTTAWA: Cases of measles have been reported in Canada. Measles is relatively rare in Canada thanks to high immunization rates across the country. However, Canada will continue to see measles cases related to travel to countries where measles is endemic or there are large outbreaks. Additionally, the United States is reporting a multi-state outbreak of measles related to an amusement park in California, which started in December 2014. Related cases have since been reported in other states and in Mexico.

OTTAWA: Two unauthorized health products that may pose serious health risks were removed from sale by Health Canada. These products, "MRM DHEA" and "Altimate Fat Burner Maximum Burn" were being sold by Nature's Source, Unit #7, 2943 Major Mackenzie Drive, Vaughan, Ontario.

OAKVILLE, ON: On behalf of Health Minister Rona Ambrose, Transport Minister Lisa Raitt and Oakville Member of Parliament Terence Young launched the Drug and Health Product Register, a new web tool designed to provide Canadians with easy access to consumer-friendly information on medicines and vaccines in order to better ensure the health and safety of themselves and their families.

OTTAWA: In Canada, honey is the only food which has been linked to infant botulism – a rare but serious illness that is caused by ingesting the bacterium *C. botulinum*. In the majority of cases of infant botulism, the source of *C. botulinum* is never determined, but because honey has been linked to cases of infant botulism, parents are advised not to feed honey to infants less than one year of age.

VANCOUVER: The Honourable Rona Ambrose, Federal Minister of Health was joined by Wai Young, Member of Parliament for Vancouver South to announce that the Government of Canada is advancing regulations that will require manufacturers to publicly report drug shortages in order for Canadians to better plan for their health and safety. By providing advanced warning of upcoming shortages, Canadians will be able to better proactively work with their healthcare professionals to find alternative options.

OTTAWA: A new warning has been added to the Canadian prescribing information for the skin-cancer drug Zelboraf (vemurafenib) advising of the risk of pancreatitis. Zelboraf is used in adults to treat a type of skin cancer (melanoma with a mutation in a specific gene) that either cannot be removed by surgery, or has spread to other parts of the body. It works by targeting proteins made from a gene called BRAF that has mutated. Zelboraf slows down or stops the growth of cancer cells.

ST. ALBERT, AB: The Honourable Rona Ambrose, Minister of Health, was joined by Crista Osualdini, Provincial Board Member, Heart and Stroke Foundation in St. Albert, Alberta has provided an update on the National Automated External Defibrillators (AEDs) initiative. Through this initiative, over 1,300 AEDs have been installed in recreational arenas across the country to date, and almost 11,000 people have been trained on how to properly use them. The goal is to have 2,000 of these life saving devices installed in recreational hockey arenas across the country by the end of the program in March 2016, and we are already halfway there.
