FROM THE NEWSWIRE

DORVAL, QC: Study results presented at the 55th American Society of Hematology (ASH) annual meeting showed that patients with myelofibrosis who received treatment with Jakavi® (ruxolitinib) sustained reductions in spleen volume and sustained improvements in quality of life after three years of treatment. These results were demonstrated in analyses from the Phase III COMFORT-1 (COntrolled MyeloFibrosis Study with ORal JAK Inhibitor Therapy) study. These long-term follow up results build on previously established data and reinforce the sustained efficacy and long-term safety profile of Jakavi® in patients with myelofibrosis.

TORONTO: Newfoundland joins seven other provinces in providing individuals living with schizophrenia access to INVEGA SUSTENNA® (paliperidone palmitate), a long-acting monthly treatment option. Available through the Newfoundland and Labrador Prescription Drug Program (NLPDP), INVEGA SUSTENNA® is indicated for the treatment of schizophrenia in adults (18 years and older).

DORVAL, QC: Novartis announced that Bexsero® (Multicomponent Meningococcal B Vaccine [recombinant, adsorbed]) is now available to doctors and pharmacists across Canada. The vaccine is approved for use in individuals from two months through 17 years of age in Canada. Infants, toddlers and adolescents are at the greatest risk of meningococcal serogroup B (MenB) infection. Bexsero® is the first broad-coverage vaccine to help protect against MenB disease. Prior to Bexsero®, vaccines were only available to help protect against meningococcal strains A, C, W and Y.
